TI - Method for extracting and analysing biological information  
and meridian information whirling feedback dredging instrument

AB - Weak biological inheritance and physiological information  
is acquired by adjustable switch circuit, non-symmetric secondary  
derivative gradient coils and ac magnetic fielding method. After  
amplification, sorting, analysis and optimazing, stored  
information is averaged and rotated into spiral vortex  
information which is fed back to organism. It may be used for  
biotics research and treating diseases.
